

The FIP_WL output surface as a function of Pitcher Innings and FIP

- Starter (n=207, win rate .501)
- Relief (n=269, win rate .507)
- Closer (n=31, win rate .606)
- $F^* = 4.04$, the .500 ridge

$F^* = 4.04$: the .500 ridge (dashed).
Height above it is wins above
break-even.

Closers (green) sit deep on the
quality axis but shallow on
opportunity: the leverage paradox.
